

Flash Drive Facts is a supplier initiative designed to help bring greater understanding about flash drives, their uses, news and up to the minute insights.....

» More to come....

What is a flash drive & How does it work?

Flash drives are hugely popular.....WHY?

As consumers we often buy things (although not as carefree as we once did) without really knowing why we do, what they do and if it is a good product. I know a bit about Flash Drives so.....

Q) What is a flash drive. ...?

A) A flash drive is a small solid state (no moving parts) memory device. **A 4 GB can hold every page of the 2009 Federal Budget Report....with room to spare!**

Q) How does it work...?

A) It is similar to your computers hard drive in that it takes any kind of information (pictures, docs, songs etc) and saves them. The difference is that if you buy a good one it will NEVER BREAK DOWN, get scratched, crash etc...NEVER.

Q) Are flash drives GREEN...?

A) Flash drives are ONE OF THE GREENEST products on the planet, here's why!

1) The power consumed in burning info onto just 1 CD can load info onto 1000 1 GB Flash Drives (equal to almost 1400 CD's worth of information and data)!!!!

2) Quality flash drives are RoHS and WEEE compliant. NO LEAD, CADMIUM and the factory uses a complete recovery process for plastics and lead-free solder.

3) You could put **EVERY ISSUE** of the **NATIONAL GEOGRAPHIC MAGAZINE** ever printed on **1 SINGLE 4 GB Flash Drive...** saving a lot of trees!

There are lots of other good reasons and uses for flash drives.....need to know? Just ask.....Thanks
